**HAZARDOUS MATERIAL**

**NHIT**

**Nebraska Hazardous  
Incident Team**

## FORMATION:

In 1987, three Nebraska State Agencies; State Patrol, Department of Environmental Quality, and State Fire Marshal organized a team to provide a diverse response to a hazardous material incident.

## COMMITMENT:

Formulated to act as an additional resource to assist the local and county officials during a hazardous materials incident.

Full time members located state wide, trained to technician level requirements in accordance with NFPA 472 and OSHA 1910.120.

Team members can also assist local and county governments as a liaison for contacting additional resources to assist during their incident.

## GOAL:

The NHIT team is to enhance the local resources that are on the scene.

## ACTIVATION OF RESPONSE TEAM:

Calling the nearest State Patrol Troop Area Dispatch Center can activate the NHIT team. Team members can cover all aspects of an incident. Members are capable of responding to both fixed facilities and transportation incidents, depending upon the severity of the hazardous material incident. Team members can be dispatched to the scene, once on the scene members can assume several different roles at an incident. They may serve as advisers, technical support, and additional manpower or provide a "hands on approach" to controlling a leak. Each member carries an SCBA, chemical protective clothing, air monitoring equipment, decontamination equipment, plugging and patching material and tools. Individual members have expertise in select areas of hazardous material response.

Law Enforcement or Fire Departments activate the NHIT Team. Team members will not assume control or responsibility of a scene.

**Team Activation is  
through State Patrol  
Troop Area Dispatch**
